

IRG Activity Report

Date of Submission: 1/10/2009

1. IRG code and name of IRG

- 1) IRG code: IRG-08-2005
- 2) Name of IRG: Research on the control mechanism and simulation of safety conditions of perishable foods transportation and logistics

2. List of research members

- P.R.China:
 - 1) Xie Ruhe (Representative)
Professor, Ph.D., Research Center for Logistics and Transportation, Guangzhou University
 - 2) Liu Guanghai
Ph.D., Director, Research Center for Logistics and Transportation, Guangzhou University
 - 3) Lin Chaopeng
Ph.D., Department of Food Science and Technology, Shaoguan University
 - 4) Zou Yifeng
Ph.D., School of Traffic and Transportation Engineering, Center South University
 - 5) Huang Xiangrong
Research Center for Logistics and Transportation, Guangzhou University
 - 6) Huang Chengzhou
Research Center for Logistics and Transportation, Guangzhou University
- England
 - 1) Alan Foster
Research Fellow, Food Refrigeration and Process Engineering Research Centre (FRPERC), University of Bristol
- Taiwan District
 - 1) Cheng-Min Feng
Institute of Traffic and Transportation, National Chiao Tung University

3. Purpose and Mission of IRG

The present goal is to study Food Logistics Technical Conditions.

Cold-chain is a system engineering to ensure the quality and reduce the loss of foods during production, storage, transportation, distribution and retailing of perishable goods under certain low temperature environment. It is a part of cool logistics and transport technology. Because of the complicated environment and long transport duration, the refrigerated transportation is the key to keep the quality in the whole cold chain.

The world population is growing. It has increased from 5.3 billion in 1990 to 6.4 billion in 2000. It is predicted to be 11.2 billion by the year of 2010. In order to meet the food demands, an efficient refrigerated transportation is necessary. According to the statistics, there are at least 1 million refrigerated trucks and 400,000 refrigerated containers in use in the world. The retail value of the products transported can be estimated more than 1200 billion US dollars.

In China, fresh and live produces and other perishable goods need refrigerated transportation urgently. According to interrelated statistics, there are more than 7000 refrigerated railway cars, 30,000 refrigerated trucks, 100,000 tonnes water refrigerated vessels and 10000 refrigerated containers in use. However, the number is still deficient. Today, more than 120 million tonnes perishable goods need refrigerated transportation, but only half of them have been transported

because of the restrict of condition and ability of refrigerated transport. More than 15% of foodstuff transported has decayed in the course of transport.

Low temperature is the key to keep the quality of perishable goods, but it is not the only necessary and sufficient condition. The excellent transport quality of perishable goods depends on the suitable control of temperature and humidity and the integrated use of multi-exercise. For example, Excessive low temperature would cause food frostbite and nutrition loss, on the other hand, excessive high temperature would result in rot. Excessive low humidity would cause serious weight-loss of food. On the other hand, excessive high humidity would result in mouldy. Moreover, temperature and humidity are only two main factors affecting quality of food transport.

This research aims to find the best control technology and method, which would keep the quality and reduce the weight-loss of perishable goods, and guarantee the edible safety of food, based on the character of perishable goods transportation.

In order to achieve the object, we will conduct a study to simulate the factors and find the principle of food. In the first, by means of refrigerated transportation experiment platform, we will test the best reference point under actual transport conditions by adjusting and controlling temperature, humidity, airflow and air composition, etc. In the second, we will set up heat and mass transfer models by computed simulation based on experiment data. The optimal control method would provide guidance for refrigerated transportation of perishable goods.

4. Achievements of IRG in 2008-2009

4.1 Paper, report and book:

- ***Degree thesis:***

- 1) Lin Chaopeng. Study on the safety risks and controlling of fresh pork supply chain [Doctor Thesis]. Tutor: Xie Ruhe. Changsha: Central South University. 2009.6
- 2) Zou Yifeng. Study on the safety reliability of food cold chain logistic [Doctor Thesis]. Tutor: Xie Ruhe. Changsha: Central South University. 2009.11
- 3) Huang Chengzhou. Refrigerating system simulation and experiment of temperature-controlled transportation [Master Thesis]. Tutor: Xie Ruhe. Guangzhou: Guangzhou University. 2008.6
- 4) Fu Wei. Study on the impact of temperature field by air supply in refrigerated containers [Master Thesis]. Tutor: Xie Ruhe. Guangzhou: Guangzhou University. 2009.6

- ***Paper:***

- 1) Liu Guanghai, Xie Ruhe. Simulation and experimentation on the heat status of refrigerated car. Journal of Wuhan University of Technology (Transportation Science & Engineering). 2009.8
- 2) Zou Yifeng, Lin Chaopeng, Fu Wei. Temperature and quality change of pasteurized milk during refrigerated distribution. Science and Technology of Food Industry. 2009.4
- 3) Liu Guanghai, Xie Ruhe. Study on standard system of food cold chain. Storage Transportation & Preservation of Commodities. 2009.7
- 4) Liu Guanghai, Xie Ruhe. Study on the status and current of refrigerated transportation unit. Guangxi Journal of Light Industry. 2009.8
- 5) Huang Xiangrong, Xie Ruhe. The emergent deliver decision model based on ant colony optimization algorithm and RBF neural network. Stat. and decision. 2009.8
- 6) Lin Chaopeng, Xie Ruhe. Study on the quality changes of fresh pork under the logistics modes. Logistics Engineering and Management. 2009.3
- 7) Xiao Wenzhong, Qiu Zhuqiang, Xie Ruhe. Evaluation of the Safety of Sale Logistics of

- Regional Fresh Agricultural Products. Industrial Engineering Journal.2009.1
- 8) Liu Guanghai, Xie Ruhe. The investigation of energy consumption of refrigerated transportation based on season and class. Guangxi Journal of Light Industry. 2009.7

4.2 Number of submitted papers to the 2009 EASTS conference

- 1) Liu Guanghai, Xie Ruhe, Chen Baoxing. Study on quality test method of banana during transportation. Surabaya: Proceedings of the Eastern Asia Society for Transportation Studies. 2009.11
- 2) Xie Ruhe, Zou Yifeng, Lin Chaopeng, Wang Lei. Temperature and quality changes of pasteurized milk during refrigerated distribution. Surabaya: Proceedings of the Eastern Asia Society for Transportation Studies. 2009.11
- 3) Huang Xiangrong, Xie Ruhe, Chen Baoxing. Performance evaluation of food cold chain logistics enterprise and its application to supplier selection decision. Surabaya: Proceedings of the Eastern Asia Society for Transportation Studies. 2009.11
- 4) Xie Ruhe, Lin Chaopeng. Quality changes of fresh pork during logistics. Surabaya: Proceedings of the Eastern Asia Society for Transportation Studies. 2009.11

4.3 Seminar, symposium and special session: (Title, Date, Venue & abstract)

Date	Proceeding	Remark
2008.1	The National Symposium of Cold Chain Standard	Guangzhou
2008.4	The National Symposium of Cold Chain	Shanghai
2008.6	The National Institute Conference of Refrigeration	Beijing
2008.6	Proc. of the 4th international conference on the food factory for the future	Laval, France
2008.9	The 15 th International Conference on Industrial Engineering & Engineering Management	Zhengzhou
2008.11	The 7 th National Conference of Logistics	Wuhan
2008.12	The National Conference of Refrigerated Transportation	Shanghai
2008.12	The National Symposium of Cold Chain Standard	Hangzhou
2009.1	The National Symposium of Cold Chain Education	Guangzhou
2009.4	2009 International Symposium on Traffic Control and Safe	Zhangjiajie
2009.5	Proceedings of Second International Conference on Modelling and Simulation	Manchester
2009.11	The 20 th National Conference of Refrigeration	Tianjing
2009.11	Proceedings of the Eastern Asia Society for Transportation Studies	Surabaya

4.4 Group meeting: (Date, Venue & abstract)

Date	Proceeding	Remark
2007.7	Group meeting	Study on the development of refrigerated transportation unit all over the world
2007.8	Group meeting	Study on the simulating test-bed of refrigerated transportation condition
2007.11	Group meeting	The International Cooperative Research Activity scheme
2008.4	Group meeting	Investigation summary and experimentation plan
2008.7	Group meeting	Experimentation plan and summary
2009.1	Group meeting	Plan and summary
2009.7	Group meeting	Plan and summary
2009.10	Group meeting	The International Cooperative Research Activity summary

4.5 Result of application for the research grants: (Name & result)

- 1) Some research production has been used in national standard "GB/T 22918-2008. Technical requirements for temperature-controlled transportation of perishable food".
- 2) Some research production has been used in national standard "Railway refrigerated car - Specification and testing".
- 3) The research production "the simulating test-bed of refrigerated transportation" got the third grade award of science and technology in China Logistics Academy in 2008.
- 4) The paper "Heat balance models for refrigerator car and simulation on the temperature field" got the third grade award of excellent paper in China Refrigerated Academy in 2009.
- 5) The paper "Study on safety reliability of cold chain system" got the second grade award of excellent paper in China Refrigerated Academy in 2009.

4.6 Promotional activities of your IRG: (Home page, Newsletter, Mailing list etc.)

Our work will be shown in www.gd56.org

The E-mail address: rhxie@gzhu.edu.cn

Will you continue your IRG's activity in next term (after November 2009) ?

[YES]

→ If "YES", please answer the following questions.

5. Future research plan including time frame with the following items:

In the future, the goal is to study the energy consumption of food perishable during refrigerated transportation.

2010.1-2010.6: On the basis of the Theoretical analysis and numerical calculation of factors which influence Refrigerated transport quality and energy consumption, do experiment on typical perishable food, analyze the impact on energy consumption and its variation, and set corresponding model; attend Related Conference of Professional Committee of the International Refrigerated Transport, issue interim research results, at the same period, team members communicate with each other.

2010.7-2010.12: By the method in which simulation first and experiment next, optimize heat-shielding performance, Closed Properties, air duct design, air-flow organization. By changing temperature control, optimize the packaging way of goods and Stacking method, improve quality and energy

consumption of refrigerated transportation, and finish the Experimental study. Simultaneously, invite foreign scholars to communicate, and publish papers at authority journal all over the world.

2011.6-2011.10: Verify the experiment and the analysis in the actual transport process, propose and consummate factors which impact Refrigerated transport quality and energy consumption, base on which modify model, optimize relevant parameters. Issue the relevant results at International Refrigeration Conference in August, 2011.

2011.10-2011.12: Finish systematic research reports, research papers and work summary and submit the report at EASTS conference.

- Possibility to hold seminar and symposium in 2010. (Date & Venue)

- 1) The 9th National Conference of Logistics, 2010, China
- 2) The National Conference of Refrigerated Transportation, 2010, China
- 3) The 3rd International Conference on Modelling and Simulation, 2010, China
- 4) The First International Conference of Cold Chain, 2010, England
- 5) The 23th International Congress of Refrigeration, 2011, Czech

- Special considerations to young researchers

Refrigerated transportation is a domain involving multi-subject and adopting various techniques, including logistics, transportation engineering, economic and management, mechanism manufacture, the technology of refrigeration, the technology of food processing, etc. Our research is comprehensive. It takes the leader in this research field.

On the other hand, 2~3 doctors and 2~3 masters will be brought up by the project.
